

Duroblade® Tissue Service Package from BTG

It's well-known throughout the industry that BTG is the inventor and producer of the original high-performance creping doctor Duroblade®, as well as the unique CBC™ creping blade holder – the first blade holder to combine independent adjustment of blade sliding angle and linear load while running.

To complement these leading-edge products, BTG is now offering a more complete Tissue Service Package comprising:

- Creping process surveys – to analyze your Yankee and monitor any abnormal running conditions
- Blade holder performance – to optimize machine runnability and tissue quality consistency
- Vibration monitoring and consultation – to evaluate which frequencies are causing operating problems
- Edge build-up evaluation and cleaning solutions – to optimize blade life and sheet edge related problems.

In addition, our skilled Tissue Service teams can help with a wide range of specialized services, including:

- Blade wear analyses – to determine blade running conditions and appropriate settings, material and design
- On-site basic and advanced training for your operators
- Complete and thorough Duroblade trial support
- Performance analyses – to determine the reasons for blade changes and to optimize blade use.

Also included in this unique, one-stop package:

- Blade tracking solutions
- Inventory management solutions:
 - Consignment stock
 - Safety stocks
 - Express delivery

To find out more about how our Tissue Service Package can help raise your productivity, visit www.btg.com or contact your local representative.
